

## White-Label “Pincaso” Web Portal

### Helps Service Providers Increase Revenue and Enhance Customer Loyalty

The NACT Pincaso Web Portal provides all of the functionality needed to sell prepaid pinless; International cell phone top-up; soft phone clients and International money transfer via e-commerce or at the store front through the new web portal.

The Pincaso, multi-tiered web portal makes it easy for service providers to establish a pre-paid distribution system, featuring a master distributor, multiple distributors, agents, and storefronts that sell the telephony products to end users. Pincaso takes care of all commission tracking – from the selling point back up through the entire chain – ensuring that everyone gets paid on a continual basis, regardless of how an account is recharged after the initial sale.

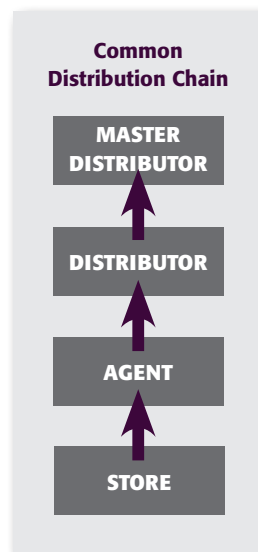

All systems come with customization services to provide a look and feel that matches your website.

This White Label solution is provided under your brand. It facilitates:

- Simple online sign-up and processing capabilities
- ACH, credit card or cash payment methods for distributors, agents and stores
- Full reporting capabilities
- IVR processing
- Text message and email confirmations
- It allows you to sell pinless directly from stores online or with hard cards
- Enables you to sell top-up, International money transfer and soft phones

The Pincaso web portal is available now as an addition to the NACT switch portfolio. It can be delivered turn-key with a server, or sold on a cloud service basis.
